

On Positive Grassroots Initiatives

Charlie Rahal

LCDS and Nuffield College, University of Oxford

Ox | Ber 2023

Initiatives like RROx are critically important because:

- Like politics, change in research culture happens at grassroots level.
 - This is partly why events like Ox | Ber are so important!
- Responsible science is a joint, community endeavour.
- Localisation enables creation of initiatives like ReproducibiliTea.
 - It enables a positive environment which encourages progress!
- Events can and have taken various forms: some social, some more pedagogical and instructional.
- In the future, we'll run a fun event which I'd like to try out today!

- In Spring, RROx is looking to play a version of the popular game:
‘Would I Lie to You? The Data Horror Stories Edition’
- I’d like to quickly test a much abridged version of it with you all.
- Which of the following are true, and which are false?

- In Spring, RROx is looking to play a version of the popular game:
‘Would I Lie to You? The Data Horror Stories Edition’
 - I’d like to quickly test a much abridged version of it with you all.
 - Which of the following are true, and which are false?
1. Following the his PhD [and student status], Charlie was required by Mathworks to pay £750 for necessary MATLAB licenses.

 4. Charlie's friend once said 'I sleep at night praying that tomorrow I can find a way to make my regression coefficients significant'.

Importantly, each of these horror stories could have been avoided – to some extent – with Open/Responsible practices!

Importantly, each of these horror stories could have been avoided – to some extent – with Open/Responsible practices!

And this is exactly the kind of positive scientific endeavour – free from horror stories – that RROx and the UKRN are trying to propagate from the ground up 😊.
